DETAILED ACTION

This office action is in response to the Response to Restriction filed 7/02/2010, in which claims 1-29 are pending, claims 16-29 have been withdrawn.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

This application is in condition for allowance except for the presence of claims 16-29 directed to species non-elected without traverse.

Accordingly, claims 16-29 been **cancelled**.

Allowable Subject Matter

Claims 1-15 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record does not fairly describe, teach or suggest, in its entirety, a gait generating device equipped with instantaneous gait generating means for sequentially generating an instantaneous desired gait composed of an instantaneous desired motion of a mobile robot and an instantaneous desire floor reaction force, wherein if: a first placement is defined as a placement of elements of the model, expressing all or part of the mobile robot, determined according to a predetermined first geometric restrictive condition, which specifies the relationship between an

Art Unit: 3661

instantaneous motion of the mobile robot and the placement of the elements of the model, from an instantaneous desired motion generated by the instantaneous gait generating means; a second placement is defined as a placement of the elements of the model determined according to a predetermined second geometric restrictive condition, which specifies the relationship between an instantaneous motion of the mobile robot and the placement of the elements of the model, from an instantaneous desired motion generated by the instantaneous gait generating means; and a third placement is defines as a placement of the elements of the model determined according to the second geometric restrictive condition from a corrected instantaneous desired motion obtained by correcting at least either the position or the posture of a predetermined part of the robot in an instantaneous desired motion generated by the instantaneous gait generating means; then the instantaneous desired motion correcting means determines the corrected instantaneous desired motion such that a moment component generated about a predetermined point by a resultant force of inertial forces of the elements calculated by regarding the difference in the placement of the elements of the model between the third placement and the first placement as acceleration is closer to a predetermined value than a moment component acting about the predetermined point due to a resultant force of inertial forces of the elements calculated by regarding the difference in placement of the elements of the model between the second placement and the first placement as acceleration.

The second reference to “the placement of the elements of the model” recited in lines 18-19 has been interpreted as referring to the immediately preceding “a placement of the elements” recited in line 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
